Project Development Phase
Performance Test

Date	24 February 2026
Project Name	**Visualization Tool for Electric Vehicle Charge and Range Analysis**
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Global EV metrics covering 33 distinct brands , Indian EV market metrics covering 9 distinct brands , Max Top Speed (KmH) , Efficiency (WhKm) , Price Range (Lakhs) , and EV Charging Station availability by Region and Type (AC-001, CCS/CHADEMO/Type 2 AC, DC-001). 2.	Data Preprocessing	Cleaned and aggregated datasets to calculate the maximum top speeds per brand , summed efficiency metrics , formatted price ranges into standard "Lakhs" blocks , and grouped charging infrastructure data by specific Indian regions.

		• 3.	Utilization of Filters	Implemented a Top 10 filter for the most efficient brands , a Power Train filter (filtering for AWD and FWD) , and specific dimension filters for Brand and Body Style. . 4.	Calculation fields Used	Aggregations including Count of Aux Addres, Max. TopSpeed KmH , Sum of Efficiency WhKm , Count of Car , and Distinct count of Brand.

		5.	Dashboard design	No of Visualizations / Graphs – Includes the main "Electric Cars Analytics Dashboard" featuring: 2 KPI text banners , a Packed Bubble chart for body styles , Bar charts for efficiency and top speed , a Pie chart for powertrain types , and a Treemap for Indian EV models.   6	Story Design	No of Visualizations / Graphs – "Story 1" walks through three specific data points: A stacked bar chart for "Region and Time in India" , a bar chart for "Price for different EVCar in india" , and a treemap for "Count of Model by each brand in India".
