Ideation Phase
Brainstorm & Idea Prioritization Template

Date	13 February 2026
Project Name	**Visualization Tool for Electric Vehicle Charge and Range Analysis**
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Reference: https://www.mural.co/templates/brainstorm-and-idea-prioritization

Step-1: Team Gathering, Collaboration and Select the Problem Statement

- **Define your problem statement (The "How Might We" statement): How might we leverage Tableau to build an intuitive data visualization dashboard that accurately displays electric vehicle (EV) range and filters local charging station availability, ultimately helping drivers eliminate range anxiety and make smart purchasing decisions?**

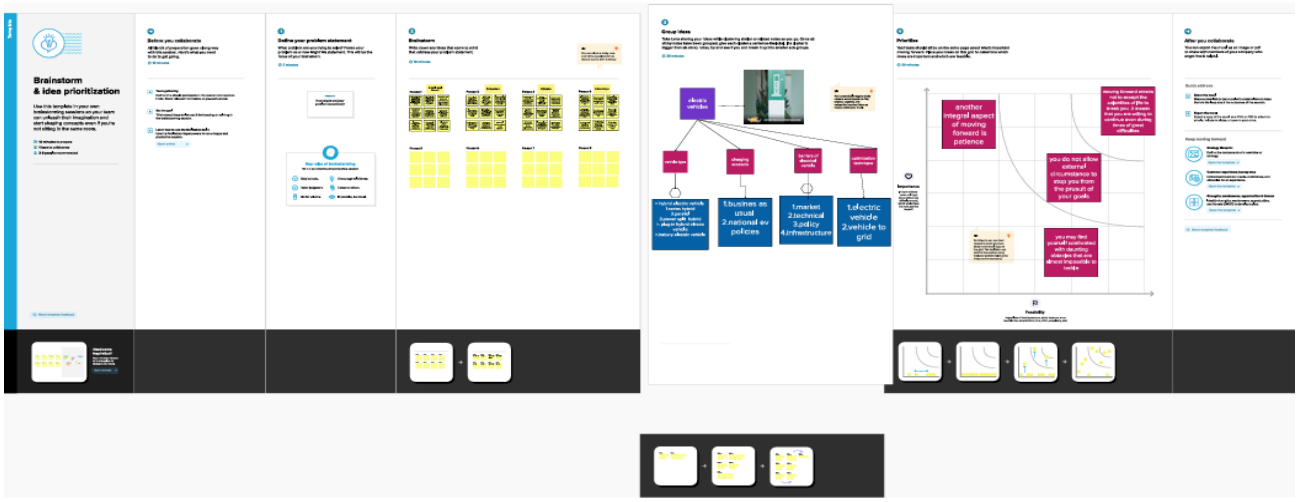
Step-2: Brainstorm, Idea Listing and Grouping

Brainstorming (The "Sticky Notes" Phase):

- **Idea 1: Use Tableau's BUFFER and MAKEPOINT functions to draw a dynamic radius on a map, showing exactly how far an EV can drive on its current charge.**
- **Idea 2: Create a map filter that lets users toggle between standard AC chargers and fast DC chargers (AC-001 vs. DC-001) so they only see compatible plugs.**
- **Idea 3: Build a bar chart comparing the Top 10 most energy-efficient EV brands (measuring Wh/Km) to help buyers cross-shop.**
- **Idea 4: Overlay an optimal road trip route onto the charging station map using dual-axis mapping.**
- **Idea 5: Create a "Charging Desert" heatmap highlighting regions in India with zero or very few EV stations.**
- **Idea 6: Implement a live API feed to show predictive wait times at each charging station.**

Group Ideas (Clustering):

- **Cluster A: Range & Routing Visualization (Ideas 1 & 4)**
- **Cluster B: Infrastructure & Station Mapping (Ideas 2 & 5)**
- **Cluster C: Market & Performance Analytics (Idea 3)**
- **Cluster D: Advanced Tech / Predictive Data (Idea 6)**

Step-3: Idea Prioritization (Mapping to the Feasibility vs. Importance Grid)


- **High Importance / High Feasibility (Do Now - Top Right of Grid):**
  - **Dynamic radius map for reachable range (Idea 1).**
  - **Filterable charging station map by connector type (Idea 2).**
  - **Top 10 EV efficiency comparison chart (Idea 3).**
- **High Importance / Low Feasibility (Explore/Do Next - Top Left of Grid):**
  - **Dual-axis routing map (Idea 4 - highly valuable, but requires complex sequential geographic data formatting before importing into Tableau).**
- **Low Importance / High Feasibility (Do Later - Bottom Right of Grid):**
  - **"Charging Desert" heatmap (Idea 5 - easy to do with existing region data, but less critical for a driver currently on the road).**
- **Low Importance / Low Feasibility (Defer - Bottom Left of Grid):**
  - **Live predictive wait times (Idea 6 - falls outside the scope of static Tableau file extracts and requires heavy back-end development).**
